EUROSTANDARD
IRAQ DISTRIBUTOR

www.eydopipe.com.tr

MELBERK INC. CORP.

Our company, which provides fast and reliable supply services to our valued customers without sacrificing quality in your infrastructure projects with its engineering and field experience approaching quarter century, has signed and continues to do many projects in the Iraqi market with you.

Our company, which is one of the pioneers of the sector, continues to be with you in sales and after sales processes with its experienced staff, following the sectoral innovations closely and offering many new product ranges to your service in line with your needs.

We are expanding our product range and service network with the distributorships of brands that have proven their quality and reliability on an international scale.

We are pleased to serve you with our strong supply network for all types of pipes, fittings, consumables and auxiliary equipment you need in the infrastructure area.

OUR ACTIVITY AREAS

- **INFRASTRUCTURE PIPES**
- **INFRASTRUCTURE PIPES FITTINGS**
- **DUCTILE IRON CASTING EQUIPMENTS**

INFRASTRUCTURE PIPES

- **CORRUGATED PIPES**
- **POLYETHYLENE PIPES**
- **RC POLYETHYLENE PIPES**
- **PVC-U DEEP WELL PIPE**
- **PVC-U PRESSURIZED PORTABLE WATER PIPES**
- **PVC-U DRAINAGE PIPES**
- **CTP PIPES**
- **DUCTILE PIPES**

INFRASTRUCTURE PIPES FITTINGS

- **CORRUGATED PIPES FITTINGS**
- **POLYETHYLENE PIPES FITTINGS**
- **RC POLYETHYLENE PIPES FITTINGS**
- **PVC-U DEEP WELL PIPES FITTINGS**
- **PVC-U PRESSURIZED PORTABLE WATER PIPES FITTINGS**
- **PVC-U DRAINAGE PIPES FITTINGS**
- **CTP PIPES FITTINGS**
- **DUCTILE PIPES FITTINGS**

DUCTILE IRON CASTING EQUIPMENTS

- **FRAMED AND HINGED GRATINGS**
- **CHANNEL GRATINGS**
- **SEWERAGE MANHOLE COVERS**
- **GUTTERED GRATINGS**

DIMENSIONS

DEFINITIONS

This publication, referring to the UNI, EN and ISO standards, uses the following geometrical definitions:

d_n	NOMINAL DIAMETER	specified diameter, in millimeters, of a PE pipe or fitting
e_n	NOMINAL WALL THICKNESS	numerical designation of the wall thickness, in millimeters, of a PE pipe or fitting
d_e	OUTSIDE DIAMETER	external diameter, in millimeters, measured at any point of the circumference of a PE pipe or fitting spigot end
d_{em}	MEAN OUTSIDE DIAMETER	dimension value of the external circumference of a PE pipe or fitting spigot end divided by π , in millimeters
SDR	STANDARD DIMENSION RATIO	relationship between the outside nominal pipe diameter d_n and the nominal wall thickness e_n
D	NOMINAL DIAMETER STEEL PIPE	nominal diameter, in inches, of a steel pipe or in millimeters
G	GAS THREAD DIAMETER	dimension, in inches, of the thread part

POLYETHYLENE CLASSIFICATION

The polyethylene classification, defined by the ISO and the EN standards is issued depending on the parameter MRS = MINIMUM REQUIRED STRENGTH, that is the minimum resistance that the polyethylene must guarantee after 50 working years at the reference temperature of 20 °C. Each MRS has a design stress value sigma (Q_s), derived by MRS dividing it with the design coefficient (C). In case of water distribution the UNI EN 12201 standard defines equal to 1,25.

DESIGNATION	MPa	
	MRS	Q_s (C=1,25)
PE 80	8,0	6,3
PE 100	10,0	8,0

The choice of the polyethylene type determines the nominal pressure PN of the pipe/fitting. For water distribution, the PN corresponds to the maximum allowable working pressure (PFA) in bar which can be maintained at the temperature of 20 °C with a design basis of 50 years, based on the design coefficient.

CHARACTERISTICS	TYPICAL	UNITS	TEST METHODS
DENSITY	958 - 959 kg	$\frac{\text{kg}}{\text{m}^3}$	ISO 1183-1
MELT MASS FLOW RATE (MFR) 5 KG/190 °C	0,23 - 0,45	g/10 min	ISO 1133-1
TENSILE STRENGTH AT YIELD	23 - 25	Mpa	ISO 527
TENSILE ELONGATION AT BREAK	≥ 350	%	ISO 527
CARBON BLACK CONTENT	2,0 - 2,5	%	ISO 6964
LINEAR THERMAL EXPANSION COEFFICIENT	$2,0 \times 10^{-4}$	$\frac{\text{m}}{\text{m} \text{ } ^\circ\text{C}}$	
BRITTLENESS TEMPERATURE	- 80	°C	ASTM D746

All fittings in the EUROSTANDARD range are injection moulded using polyethylene compounds type PE 100 and PE 100-RC suitable for pipelines for the distribution of gas, water and other fluids under pressure. The characteristics are in conformity with the standards EN 1555, EN 12201 and EN ISO 15494. The compounds used, normally added at the origin with carbon black for the UV stabilization, are suitable for drinking water and foodstuffs as provided in the D.M. 21 March 1973 and the D.M. n. 174 dated 6 April 2004. EUROSTANDARD fittings are weldable with PE 80 and 100 pipes and fittings having melt mass-flow rate 0,2 - 1,4 g/10 min (ISO 1133-1 5 kg / 190 °C). PE 100 fittings are weldable with PE 80 pipes/fittings and viceversa, either using buttfusion (if only of the same nominal thickness and same nominal diameter) or using electrofusion.

PRODUCT TESTINGS

EUROSTANDARD fittings are continuously monitored throughout the entire production process in accordance with the internal testing programs in compliance with the standards EN 1555, EN 12201 and EN ISO 15494. The testing activities are continuously carried out following up the complete observance of the reference standards and foresee tests of mechanical and physical type, either on the fittings and on the raw material. Particularly, the production is subjected to the following tests:

MELT MASS FLOW RATE (MFR)

UNI EN ISO 1133-1

DIMENSIONAL CONTROL – APPEARANCE TEST

MARKING CONTROL – ELECTRICAL WIRE RESISTANCE

UNI EN 1555

UNI EN 12201

UNI EN ISO 15494

UNI EN ISO 3126

RESISTANCE TO HYDROSTATIC INTERNAL PRESSURE AT 20 °C AND 80 °C

UNI EN ISO 1167

TENSILE STRENGTH ON BUTTFUSION FITTINGS

ISO 13953

IMPACT RESISTANCE ON ELECTROFUSION SADDLES

UNI EN 1716

DECOHESIVE RESISTANCE ON ELECTROFUSION FITTINGS (PEEL TEST AND CRUSH TEST)

ISO 13954

ISO 13955

ISO 13956

OXIDATION INDUCTION TIME (OIT)

ISO 11357-6

MARKING

EUROSTANDARD fittings have the following information stated on the fitting and/or on a label:

	producer identification
I0000101/20	batch reference and/or month and year of manufacture
PN_	nominal pressure rating at 20 °C for water
S_	gas series of pipe
SDR_	standard dimension ratio
d_	nominal size of the fitting (mm)
PE100	raw material type used
UNI_ EN_ ISO_	product standard
RINA	conformity marking
GRADO B	dimensional tolerance

The barcode label is applied on the electrofusion fittings containing the welding parameters according to standard ISO 13950 and the traceability data of the fitting according to standard ISO 12176-4.

LABORATORY ACCREDITATION

The EUROLAB Laboratory, belonging to Eurostandard, operates in accordance to the standard EN ISO/IEC 17025:2018 and is accredited from ACCREDIA - Italian Accreditation Body - with accreditation number 0740L. The accreditation certifies the technical qualification of the Laboratory relatively to the accreditation field reported in the Test List enclosed to the certificate, downloadable from the website www.accredia.it. The in-force status of the accreditation can be checked on the same website.

CONFORMITY MARKINGS

Eurostandard is authorized to use the RINA Quality Marking with reference to the standards UNI EN 12201-3, EN 12201-3, UNI EN 1555-3, EN 1555-3, UNI EN ISO 15494, EN ISO 15494 for the fittings as detailed in the enclosed papers to the Conformity Certificates.

For information on the validity of the Conformity Certificates, visit the website www.rina.org.

Download of Certificates of Conformity and relevant enclosures on website www.eurostandard.it.

Eurostandard is also authorized to use several conformity markings of primary international certification bodies operating in the relevant sector. Here below are some examples. For information on the validity of the Conformity Certificates and the applicability to each fitting, please contact Eurostandard.

QUALITY SYSTEM CERTIFICATION

ISO 9001

The EUROSTANDARD QUALITY MANAGEMENT SYSTEM involves and manages all activities within the Company in order to achieve the optimum level of the quality standards. That is on the basis of the directions imposed in the ISO 9001 standard, which points out the requirements for an organization that needs to demonstrate its capability to regularly provide products or services which satisfy the client requirements and those mandatory, and wants to increase the satisfaction of its clients. The codified and controlled management of the company activities is described in the documents which form the System Manual and in the relative managing and technical procedures.

The “Quality & Environment” function guarantees the integration of the various activities which determine the quality of the supplied products and of the system itself.

The correct management of all documents allows the complete traceability of the product through the batch reference number or other codes assigned during the production.

The Eurostandard policy is published on the website www.eurostandard.it.

ENVIRONMENTAL CERTIFICATION

ISO 14001

The EUROSTANDARD ENVIRONMENTAL MANAGEMENT SYSTEM involves and manages all activities within the Company in order to render to the minimum the environmental impacts deriving from themselves and avoid pollution. This happens in conformity to the prescriptions of the standard ISO 14001, which specifies the requirements of an environmental management system that an organization can use to improve its environmental performances and fulfil the expected and specified results; among these, the fulfilment of the conformity requirements and the achievement of the environmental targets. The management and control methodologies of the firm activities are described in details in the System Manual and in the environmental procedures. The Eurostandard policy for environment is published on the website www.eurostandard.it.

- Do not cut the steel part as it could origin deformations on PE collar due to overheating
- Suitable for gas and water pipelines
- Steel pipe according to UNI EN ISO 3183 and galvanized according to UNI EN 10240 A1 ("lead free galvanized pipe")
- Type A: galvanization removed on the end steel section where the welding is carried out
- Type H: steel pipe coating according to standard UNI 9099 with triple coat (R3) and with reinforced thickness class (R)
- On request type galvanized coated pipe for welding
- Buttfusion unadvised for diam < 63 mm

Moulded in PE 100-RC

- Weldable with electrofusion EURO SDR 11 and SDR 74 fittings - in case of use with other brand fittings, please contact EUROSTANDARD in advance
- Extension of the metallic overmoulded part on the whole length
- Suitable for gas and water pipelines
- Measure and respect the insertion depth inside the electrofusion fitting
- Weld only using electrofusion fittings
- Scraping of the PE end is compulsory
- During the screwing, lock the metallic hexagon to avoid any stress on the PE part

- _ Suitable for gas and water pipelines
- _ Steel pipe according to UNI EN ISO 3183 or ANSI/API 5L gr. B and galvanized according to UNI EN 10240 A.1 ("lead free galvanized pipe")
- _ Galvanizing removed on the welding end
- _ Do not cut the steel part as it could origin deformations on PE collar due to overheating

ELECTROFUSION WELDING UNITS

- POLYVALENT
- WELDING UNIT

SDR 11 - PN 16

The electrofusion welding unit model Euro SP1 plus is a polyvalent unit suitable for the welding of all electrofusion fittings up to diameter d. 630. It allows to operator to work at safety voltage lower than 50 Volt, is manufactured according to UNI 10566 and ISO 12176- 2 standards, as well as provided with CE mark.

The heating power is automatically adjusted, reading of the barcode by means of a scanner or manual entering of the 24 digits shown under the barcode, or manually by setting of the welding voltage and time. Automatically (scanner or 24 digits) the heating power is adjusted by the ambient temperature. The welding unit model Euro SP1 plus adopts the switching technology, which permits to be light and compact. A display and the intuitive keyboard guide the operator during all operative phases of the programming, displaying the evolution of ambient temperature, the welding voltage and current, the cycle time, the progressive number of weldings and the possible error or malfunctioning messages. When switching-on the supply voltage is measured and displayed for proper control.

The welding unit model Euro SP1 plus is enabled in the storing of the operator code, of the site location, of the welding data and hour and of the welding parameters. The scanner is enabled for the reading of the raceability barcodes of fittings and pipes and allows the maximum operative ease in all site conditions. The welding unit model Euro SP1 plus is supplied with USB connection port (pen drive is included) and serial port for the transfer of the welding data to the PC which afterwards can be used with DBManager Cloud for the management of the printing and storing operations.

The welding unit must be submitted to periodic overhaul (biennial) according to manufacturer and to standards UNI 10566 and ISO 12176-2.

CHARACTERISTICS

supply voltage	230V -20% / +15%
frequency	50/60 Hz
output voltage	8 ÷ 48 V
inrush current	110 Amp
output current at 80%	80 Amp
max power consumption	4500 W
operating temperature	-10 °C +45 °C
port connections	USB/host - serial RS/232
protection	IP 54
working range	20 ÷ 630 mm
working modes	barcode reading and manual setting
welding barcodes according to ISO 13950	welding - Interleaved 2.5/24 digit
traceability barcodes according to ISO 12176/3/4	operator - Interleaved 2.5/30 digit traceability - 128/26/40 digit
barcode reading system	scanner
manual system	setting: time and voltage or 24 digit barcode sequence
welding cycle capacity	n. 1600
connectors	4.0 mm
ancillary connectors	4.7 mm
dimensions LxPxH	32x26x38 cm
weight	17 kg
ancillary equipment on request	GPS carry wood box

The electrofusion welding unit model Euro MIDI is a polyvalent unit suitable for the welding of all electrofusion fittings up to diameter d. 400. It allows to operator to work at safety voltage lower than 50 Volt, is manufactured according to UNI 10566 and ISO 12176-2 standards, as well as provided with CE mark.

The heating power is automatically adjusted, reading of the barcode by means of a scanner or manual entering of the 24 digits shown under the barcode, or manually by setting of the welding voltage and time. Automatically (scanner or 24 digits) the heating power is adjusted by the ambient temperature.

A display and the intuitive keyboard guide the operator during all operative phases of the programming, displaying the evolution of ambient temperature, the welding voltage and current, the cycle time, the progressive number of weldings and the possible error or malfunctioning messages. When switching-on the supply voltage is measured and displayed for proper control.

The welding unit model Euro MIDI is enabled in the storing of the operator code, of the site location, of the welding data and hour and of the welding parameters.

The scanner is enabled for the reading of the traceability barcodes of fittings and pipes and allows the maximum operative ease in all site conditions. The welding unit model Euro MIDI is supplied with USB connection port (pen drive is not included) to allow the transfer of the welding reports in PDF format to the PC.

The welding unit must be submitted to periodic overhaul (biennial) according to manufacturer and to standards UNI 10566 and ISO 12176-2.

CHARACTERISTICS

supply voltage	230V +/-15%
frequency	50/60 Hz
output voltage	8 ÷ 48 V
inrush current	100 Amp
output current at 60%	75 Amp
max power consumption	4600 W
operating temperature	-10 °C +45 °C
port connections	USB 2.0 host
protection	IP 54
working range	20 ÷ 400 mm
working modes	barcode reading and manual setting
welding barcodes according to ISO 13950	welding - Interleaved 2.5/24 digit
traceability barcodes according to ISO 12176/3/4	operator - Interleaved 2.5/30 digit traceability - 128/26/40 digit
barcode reading system	scanner
manual system	setting: time and voltage or 24 digit barcode sequence
welding cycle capacity	n. 1000
connectors	4.0 mm
ancillary connectors	4.7 mm
dimensions LxPxH	25x32x26 cm
weight	19 kg
ancillary equipment on request	carry wood box

The electrofusion welding unit model Euro JUNIOR is a polyvalent unit suitable for the welding of all electrofusion fittings up to diameter d. 160. It allows to operator to work at safety voltage lower than 50 Volt, is manufactured according to UNI 10566 and ISO 12176-2 standards, as well as provided with CE mark.

The heating power is automatically adjusted, reading of the barcode by means of a scanner or manual entering of the 24 digits shown under the barcode, or manually by setting of the welding voltage and time.

Automatically (scanner or 24 digits) the heating power is adjusted by the ambient temperature.

A display and the intuitive keyboard guide the operator during all operative phases of the programming, displaying the evolution of ambient temperature, the welding voltage and current, the cycle time, the progressive number of weldings and the possible error or malfunctioning messages. When switching-on the supply voltage is measured and displayed for proper control.

The welding unit model Euro JUNIOR is enabled in the storing of the operator code, of the site location, of the welding data and hour and of the welding parameters.

The scanner is enabled for the reading of the traceability barcodes of fittings and pipes and allows the maximum operative ease in all site conditions. The welding unit model Euro JUNIOR is supplied with USB connection port (pen drive is not included) to allow the transfer of the welding reports in PDF format to the PC.

The welding unit must be submitted to periodic overhaul (biennial) according to manufacturer and to standards UNI 10566 and ISO 12176-2.

CHARACTERISTICS

supply voltage	230V +/-15%
frequency	50/60 Hz
output voltage	8 ÷ 42 V
inrush current	60 Amp
output current at 60%	27 Amp
max power consumption	2300 W
operating temperature	-10 °C +45 °C
port connections	USB/host
protection	IP 54
working range	20 ÷ 160 mm
working modes	barcode reading and manual setting
welding barcodes according to ISO 13950	welding - Interleaved 2.5/24 digit
traceability barcodes according to ISO 12176/3/4	operator - Interleaved 2.5/30 digit traceability - 128/26/40 digit
barcode reading system	scanner
manual system	setting: time and voltage or 24 digit barcode sequence
welding cycle capacity	n. 500
connectors	4.0 mm
ancillary connectors	4.7 mm
dimensions LxPxH	24x17x25 cm
weight	12 kg
ancillary equipment on request	transport bag carry wood box

The barcode is an universally recognized system to store up information and to allow their reading by proper systems such as scanner or light pen. For the electrofusion system of polyethylene, the BARCODE type INTERLEAVED “2-in-5” with 24 digits with control character according to standard ISO 13950.

The information stored in the code, and carried on the label, allow the suitable control unit to understand automatically the characteristics of the fitting to be welded and to consequently work.

The code stores all information necessary for the electrofusion cycle: type of fitting, diameter, fusion time and cooling time, control character of a correct reading, identification key.

The main characteristic of this system is to avoid any possibility of errors in the fixing from the operator, who must only acquire the data from the barcode and confirm manually the correct reading.

The guarantee of correct code reading is determined from the control character carried on the label. Possible differences between the fitting connected to the control unit and the wrong reading of the code are shown on the display, which does not proceed in the memorized sequence.

TRACEABILITY BARCODE

It is an universally recognized system for “tracing” the information relative to the fitting and pipes welded (manufacturer, type of fitting, batch, raw material, production site, etc). All these information are stored in the BARCODE LABEL type CODE 128 with 26 digits with control character according to standard ISO 12176-4.

The reading of the barcode with optical pen/scanner on universal units allow to store all traceability data inside the ef unit and the subsequent transfer to PC, obtaining a complete traceability of the welding operations of the fittings.

ACCESSORIES

- ALIGNING CLAMP
- PIPE CUTTER
- PIPE SCRAPER
- DETERGENT

ALIGNING CLAMP

Protects the jointing, either during the electrofusion or the subsequent cooling, from external mechanical stresses, allows to revise possible off-centering between both ends to be welded and to recover the out-of-round of parts, if ovalized.

The aligning clamp is auxiliary to the control unit, its use is essential for the successful electrofusion jointing. Simultaneous use of multiple aligning clamps will positively affect the speed of installation.

COD. 12.67	aligning clamp with movable joint - type EASY-315 suitable for the welding of diam. 140 ÷ 315 mm

PIPE CUTTER

COD. 15.39/40/41

A square cut of the pipe to be welded is carried by means of a pipe cutter, type with roller or with tool; choosing the type, it is important to verify the diameter according to the thickness of the pipe to be cut.

PIPE SCRAPER

For the removal of the oxide layer on pipes/fittings are used manual scrapers with straight interchangeable blade and pipe scrapers, type mechanical which are fastened on the pipe end. The use of this equipment means the perfect flatness of the pipe end, which is only achieved with the pipe cutter.

PIPE CUTTER

COD. 15.39	diam. 20 - 63 mm (max cut thickness 7 mm)
COD. 15.40	diam. 50 - 125 mm (max cut thickness 13 mm)
COD. 15.41	diam. 110 - 160 mm (max cut thickness 16 mm)

MANUAL SCRAPER

COD. 15.42	cutter usable on 4 sides by overturning on the central screw

Heating plate	5,0	6,5	10,0	13,0
Supply voltage	230V ± 10% - 50 Hz			

The buttfusion welding unit model TE is built according to the UNI 10565 standard, is provided with CE marking and guarantees:

- _ a correct axial adjustment/movement of the pipes through the clamps;
- _ a proper and true facing of the pipes/fittings through the facer tool;
- _ an accurate control of the welding pressure and of the temperature of the heating plate;
- _ the conformity to the safety standard regulations.

Each machine can butt weld different diameters; according to the pipe diameter, the reducing inserts are fitted into the standard clamps.

The buttfusion machine consists of a supporting mounting with fixed and movable clamps. Those movable, hydraulically driven with manual or electrical control, are rolling on two guides. The machine is provided with an electrical facer tool, an electrically heating plate, an electro-hydraulic unit with distributor and pressure gauge with manometer. The heating plate guarantees uniform temperature on its whole surface. The temperature control is carried out with an adjustable thermostat which guarantees a maximal variation of ± 2 °C of the stated temperature.

The buttfusion units are provided with industrial plug, IEC standards protective measures, 2 poles + earth 16A - 220V. The welding unit must be submitted to periodic overhaul (biennial) according to manufacturer and UNI 11732 standard.
